Hi Doctor Card,

This is Aaron Zhao, a PhD graduate student at the University of California Merced. I am deeply inspired and interested with your research article, "Computational analysis of 140 years of US political speeches reveals more positive but increasingly polarized framing of immigration". In particular, I am fascinated by your brilliant employment of the contextual embeddings of text method for this paper and I am wondering if it is possible for me to request some more information on the data and codes used for this article. If it is not too much trouble, may I please request the codes and data you have used for this paper, Doctor Card? Thank you very much.

Sincerely,

Aaron Zhao
